Supplementary Table 3: Synthetic viral sequences library (T12)

Virus	Gene	Protein function
Influenza A virus (H1N1)	Neuraminidase	Envelope, host cell attachment
	Hemagglutinin	Envelope, host cell attachment
Dengue type 1 virus	Capsid protein	Structural
	Protein M	Envelope, structural
	Protein E	Envelope, host cell attachment
	Non-structural protein 1	Virus replication and regulation of host immune response
	Non-structural protein 2A	Viral RNA replication and capsid assembly
	serine protease NS2B	Cofactor for the serine protease function of NS3
	Serine protease NS3	Cleaves the virus genome polyprotein into component proteins
	Non-structural protein 4A;	Viral replication
	Non-structural protein 4B;	Regulation of host immune response
	RNA-directed RNA polymerase NS5	Replication of viral genome
Human herpesvirus 4 (Ebstein-Barr virus)	Glycoprotein 42 (gp42)	Envelope, host cell attachment
	BMRF2	Envelope, host cell attachment
	gp350 (BLLF1)	Envelope, host cell attachment
Human herpes virus 8 (Kaposi's sarcoma virus)	Envelope glycoprotein B (gB)	Envelope, host cell attachment
Zaire ebola virus	GP1	Envelope, host cell attachment
	GP2	Envelope, host cell fusion
Lake Victoria marburgvirus	GP1	Envelope, host cell attachment
	GP2	Envelope, host cell fusion
Newcastle disease virus	Fusion glycoprotein F0	Envelope, host cell fusion
Measles virus	Hemagglutinin glycoprotein	Envelope, host cell attachment
Human respiratory syncytial virus B	Fusion glycoprotein F0	Envelope, host cell fusion
Vesicular stomatitis Indiana virus	Glycoprotein G	Envelope, host cell attachment
Influenza C virus	Hemagglutinin-esterase-fusion glycoprotein	Envelope, host cell fusion

Adeno-associated virus 2	VP1 (Virion protein 1)	Structural capsid protein and cell attachment
Foot-and-mouth virus	Protein Leader	Protease: cleaves virus genome polyprotein into component proteins
	Protein VP2	Structural, capsid, cell attachment
	Protein VP3	Structural, capsid, cell attachment
	Protein VP4	Structural, capsid, cell attachment
	Protein VP1	Structural, capsid, cell attachment
	Protein2AB	Effects host cell membrane permeability
	Protein 2C	Effects intracellular membranes
	Protein 3A	Virus genome replication
	Protein 3B	Virus genome replication
	Protein 3C	Virus genome replication
Hepatitis A virus	Protein 3D	Virus genome replication
	Protein Leader	Protease: cleaves genome polyprotein into component proteins
	Protein VP1	Structural, capsid, cell attachment
	Protein VP2	Structural, capsid, cell attachment
	Protein VP3	Structural, capsid, cell attachment
	Protein VP4	Structural, capsid, cell attachment
	Protein2A	Effects host cell membrane permeability
	Protein2B	Effects host cell membrane permeability
	Protein 2C	Effects intracellular membranes
	Protein 3A	Virus genome replication
Human parechovirus 1 (echovirus 22)	Protein 3B	Virus genome replication
	Protein 3C	Virus genome replication
	Protein 3D	Virus genome replication
	Protein VP0	Structural, capsid, cell attachment
	Protein VP1	Structural, capsid, cell attachment
	Protein VP2	Structural, capsid, cell attachment
	Protein VP3	Structural, capsid, cell attachment
	Protein2AB	Effects host cell membrane permeability
	Protein 2C	Effects intracellular membranes
	Protein 3A	Virus genome replication
Simian Virus 40	Protein 3B	Virus genome replication
	Protein 3C	Virus genome replication
Simian Virus 40	Protein 3D	Virus genome replication
	VP1	Structural, capsid, cell attachment and entry
	VP2	Structural, capsid, viral particle assembly

	VP3	Structural, capsid, viral particle assembly
Rotavirus A	VP4	Structural, capsid, cell attachment
	VP7	Structural, capsid, cell attachment
	Attachment protein σ1	Structural, capsid, cell attachment
Avian leukosis virus RSA (RSV-SRA) / Rous sarcoma virus	Envelope glycoprotein gp95	Envelope, viral-host cell fusion
Human immunodeficiency virus 1	Envelope glycoprotein gp160 (gp120 and gp41 chains)	Envelope, host cell attachment and viral-host cell fusion
Sindbis virus	Capsid protein	Structural, capsid, viral assembly
	E3 protein (Spike glycoprotein E3)	Envelope, function unknown
	E2 envelope glycoprotein (spike glycoprotein E2);	Envelope, host cell attachment
	6K protein;	Envelope, host cell membrane permeabilization
	E1 envelope glycoprotein (Spike glycoprotein E1)	Envelope, virus-host cell fusion
Hepatitis B virus	Large envelope protein (L glycoprotein or S protein)	Envelope, host cell attachment
Human herpes virus 1 (HSV-1)	Envelope glycoprotein C (gC)	Envelope, host cell attachment
	Envelope glycoprotein B (gB)	Envelope, host cell attachment
Human herpes virus 5 (CMV)s	Envelope glycoprotein B (gB)	Envelope, host cell attachment and entry
Human adenovirus C serotype 2 (HAdv-2)	Fiber protein	Structural, capsid, host cell attachment
Human papilloma virus 16	Major capsid protein L1	Structural, capsid, cell entry
	Minor capsid protein L2	Structural, capsid, cell entry

## Supplementary Tables: Proteins

CPP\_EBD\_S11 and CPP\_TRX\_S11 recombinant proteins were constructed in pET28a+ and expressed as previously described<sup>1</sup>.

Supplementary Table 4: pET28a+ constructs; recombinant biologic cargos

DNA sequences were synthesized and cloned (ATUM, USA) into the *Nco*I and *Xho*I sites of pET28a<sup>+</sup> vector (Merck Millipore).

Protein references: SpyCatcher (GenBank: JQ478411.1), Bouganin (GenBank: AAL35962.1; expressed protein is Bouganin 27-276aa), β-lactamase (NCBI Reference Sequence: WP\_015058867.1; expressed protein is BLA 24-286 aa).

Protein sequences for PAP<sup>2</sup>, Omomyc<sup>3,4</sup> and Affibody<sub>EGFR-1907</sub><sup>5</sup> were sourced from the literature.

					Thioredoxin (Trx) solubility tag and are italicized. Used in Omomyc cell viability assays.
--	--	--	--	--	--

NT = Amino terminus; CT = Carboxy terminus.

Supplementary Table 5: PASylated SpyC protein

PAS\_SpyC was expressed from vector pASK37 and the construct was cloned in two parts. First, the DNA sequence of the SpyCatcher (SpyC) section coding sequence was synthesized with an N' linker (MPACSSA) that contains a *SapI* recognition site for the insertion of P/A gene sequences<sup>6</sup> and a cysteine residue for later maleimide-conjugation, followed by a minimized SpyC<sup>7</sup> (comprising Asp48 to Gly130<sup>8</sup>) which was synthesized with a C-terminal *Strep-tag II*<sup>9</sup> followed by a *HindIII* recognition site. The synthesized fragment was cloned on the vector pASK37 using *NdeI* and *HindIII* restriction sites to form an interim SpyC construct. Second, the interim SpyC construct was linearized using *SapI* and a P/A#1(600) gene cassette was inserted into the N-terminal linker upstream of the SpyC gene.

Protein expressed	Sequence with annotations	kDa	pI	Notes
PAS_SpyC	MPA <u>CSSA</u> APAAPAPAPAAPAPAAPAAAPAPAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAAAPAPAAPAPAAP APAAPAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPAPAAPAPAAPAPAAPAAAPAPAAP APAAPAAAAPAAPASA <u>W</u> SHPQFEK	59.0	4.8	<p>PAS_SpyC comprises an N-terminal Cys-residue that was incorporated to enable the conjugation of small molecule targeting ligands (as a negative control, the Cys residue was conjugated to aminoethyl-maleimide). The PAS(600) moiety comprising 600 P/A (Pro and Ala) residues served for plasma half-life extension according to the PASylation technology. The SpyCatcher was employed in its minimal version and the Strep-tag II was incorporated for detection and/or purification purposes. The resulting multi-functional fusion protein can be easily conjugated to SpyTag-containing peptides.</p>

SUMO_Avi3	MSDSEVNQEAKPEVKPEVKPETHINLKVS DGSSEIFFKIK KTTPLRRLMEAFAKRQGKEMDSLRF LYDGIRI QADQTPED LD MEDNDIIIEAHREQIGGSS GLNDIFE AQKIEWHEGGSGL NDIFE AQKIEWHEGGSGLNDIFE AQKIEWHE	17.2	4.7	97 aa SUMO cds followed by 3 consecutive Avitags, each “domain” separated by GSS linkers.  Co-transformed into phage host cell strain BLT5615 to produce non-biotinylated T7_phiage particles. The leaky tac promoter produces a SUMO protein with 3 consecutive avitag sequences. This “decoy” protein is strongly biotinylated thus depleting the <i>E. coli</i> biotinylation machinery before T7 phage production is induced by the addition of IPTG.
